▼ Power Digging ▼

Nurserymen throughout the country are rapidly realizing the great importance of properly dug trees. *Because:* a tree taken up with all the fibrous roots insures growth and livability.

At our nurseries the spade is now almost "out of the picture" as far as tree digging is concerned.

Our new development—the new seventy horsepower equipment—shown here in action is pulling the digger in the row by means of dual steel cables.

The special built blade is extra large and made purposely for deep cutting. We can now handle anything, including heavy shade trees up to 5-inch caliper.

All of our stock is dug in this way, including our wholesale specialty CHINESE ELM (*Ulmus*

pumila), both trees and seedlings. Thus, when you buy Chinese Elm from us, you can be sure of getting stock with *excellent roots*. You can be sure, too, of well branched, symmetrical stock, heavily calipered and up to grade.

From the use of a trencher in planting and the best of equipment for economical growing and digging, our production costs are lowered materially, to the extent that we can reduce our prices on first-class stock.

Read the inside pages of this folder carefully and note particularly our new reduced prices, for here is an opportunity for added profits that should not be overlooked.

CHINESE ELM
ULMUS PUMILA (Northern Strain)

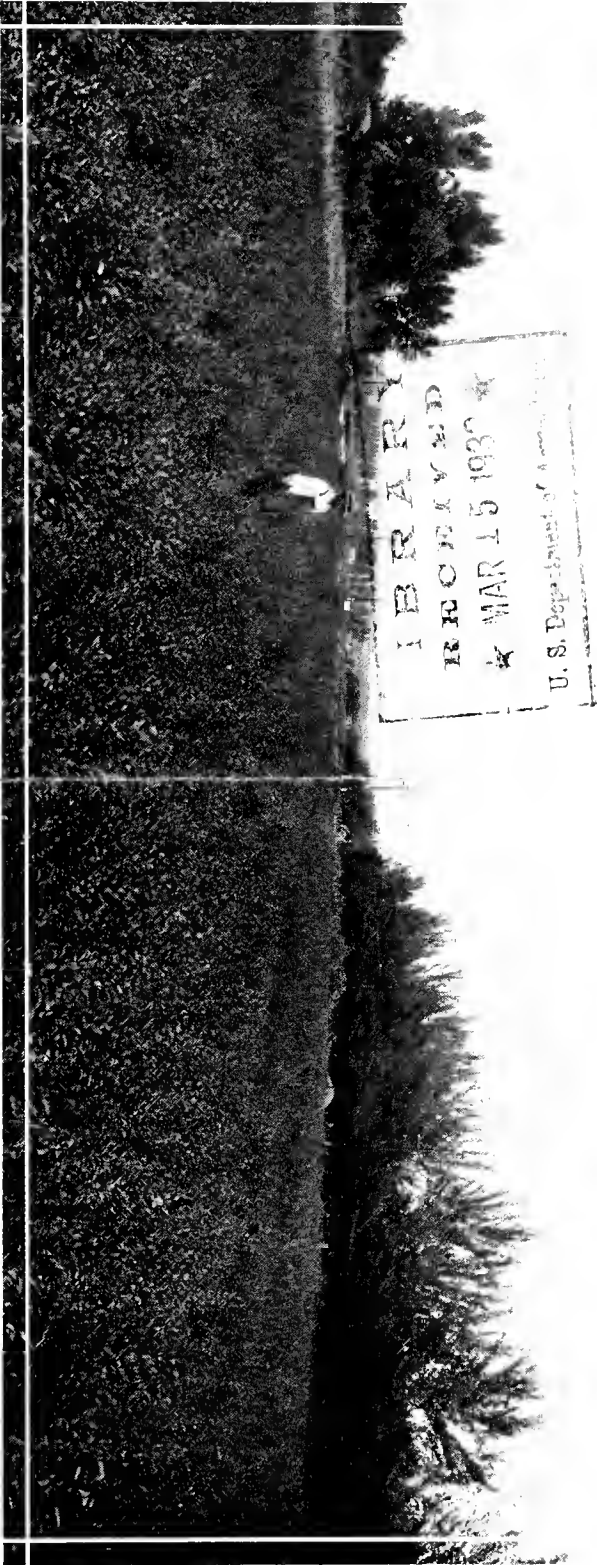

The Quick-Growing Money Maker for the Nurseryman

IN 1926, realizing the value of the newly introduced Chinese Elm, we began growing them in quantity for the wholesale trade.

Our soil and climate proved to be ideal, producing well matured, hardy stock.

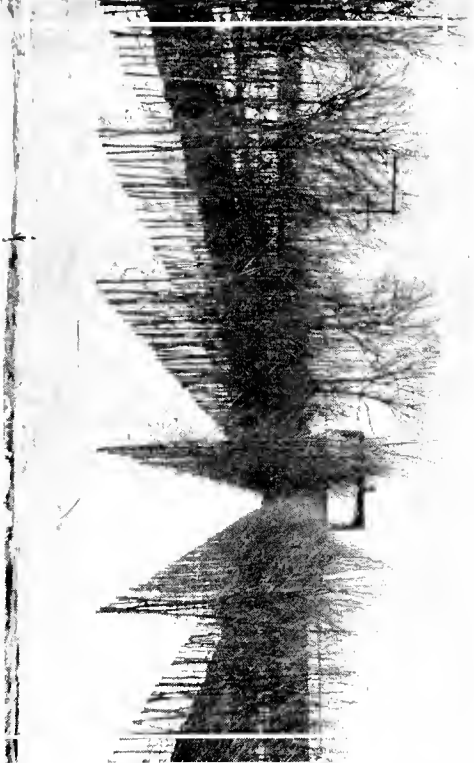

We have steadily increased our planting, shipping throughout the States and Canada millions of seedlings and trees. They have grown in popularity faster, perhaps, than any other tree introduced by the U. S. Department of Agriculture.

The Chinese Elm has all the qualities of a fine tree—rapid growth, drought resistance, hardness and beauty.

One of our blocks of Ulmus Pumila, hardy northern strain. These rows are 3½ feet apart, giving ample room for the development of the stock. The ground is a rich, sandy, well-drained loam, and the irrigation was cut off in plenty of time to allow the wood to ripen thoroughly. This is especially important with Ulmus Pumila seedlings.

Plant Our Northern Type Chinese Elm for Quick Shade Anywhere

A section of one of our blocks showing two-year Chinese Elm trees. Note the splendid upright growth, uniform branching and straight stems. These Chinese Elms (Ulmus Pumila-northern strain) are the hardiest and best type tree to plant

A fine block of hardy one-year transplants. These trees have been carefully trimmed and are all uniform single leader types. After another year of growth they should caliper up to the 1½-inch and then will be ready for market.

Beautiful, Sturdy and Quick Growing

THE Chinese Elm is a tree of rare beauty; it resists drought and cold; thrives on poor soil; it is a tree of rapid growth; it holds its foliage until late in the fall. The Chinese Elm is a real contribution from the Orient to the Occident, and is taking its place as one of the most popular shade and street trees of America.

As a shade, windbreak and avenue tree the Chinese Elm has proved itself.

It's the Tree of Today—Are You Ready for the Demand?

WANTED: We are in the market for Rock Garden Plants, Water Lilies and other water plants. Please quote prices.
